SONDE FIX PLAN

Add a non-color visual indicator to links: underline (text-decoration: underline), border-bottom, increased font-weight, or a visible icon. The indicator must be present in the default state, not just on hover.

MEDIUM

Link is distinguished from surrounding text only by color (link: rgb(0, 15, 51), text: rgb(0, 0, 0)). Users who cannot perceive color differences may not identify this as a link.

SONDE FIX PLAN

Add a non-color visual indicator to links: underline (text-decoration: underline), border-bottom, increased font-weight, or a visible icon. The indicator must be present in the default state, not just on hover.

MEDIUM

Link is distinguished from surrounding text only by color (link: rgb(0, 15, 51), text: rgb(0, 0, 0)). Users who cannot perceive color differences may not identify this as a link.

Methodology

The Sonde Score is a universal 0–1000 compliance index — think of it like a credit score for accessibility. Each finding is weighted by its impact on human access: a keyboard trap (critical) counts far more than a best-practice suggestion (low). The raw penalty is normalized per page so scores are comparable across sites of any size. A harmonic curve ensures every site gets a meaningful score — no zeros, no false perfection.

```
Score = round(1000 × S / (S + P/N))
```

where S = sensitivity (750), P = Σ(weight × count), N = pages scanned

TIER	WEIGHT	EXAMPLES
Critical	10	Keyboard traps, missing page language
High	3	Missing alt text, insufficient contrast
Medium	1	Heading hierarchy, unclear link purpose
Low	0.25	Best-practice suggestions

The Sonde Score is a living standard (v0.1). We're building it in the open because accessibility is too important for closed-door decisions. Your expertise makes it better.

This report is a health check, not a verdict. Every website has room to improve.

Disclaimer: This report presents the results of automated accessibility analysis and is provided free of charge, as-is, without warranty of any kind. Findings are generated by software, not by human accessibility experts, and may contain errors or omissions. Automated testing can detect approximately 30–40% of accessibility issues; manual expert evaluation is recommended for complete conformance assessment. Scores reflect algorithmic analysis under a published methodology open to public review—they are not legal determinations of compliance. Results reflect the state of the website at the time of scanning and may change as the site is updated. Nothing in this report constitutes legal advice.
